

## WEBSITE PROJECT FINAL PHASE: Section 1

**Purpose:** The purpose of this website is to inform people about anime, a television genre which is hand-drawn and computer animated, and to interest them in becoming a fan. Although anime originates from Japan, it is popular in many countries around the world such as the United States.

**Goals:** The first goal of my website is to inform people about anime by giving them an introduction to the genre. This includes when anime was created and the process on how it is created. Many people do not realize how long it takes to create an anime. Furthermore, anime shows implement good soundtracks with famous musicians. By including this information, people who never watched anime will feel interested in doing so. The second goal of my website is to provide a list of unreleased and released anime to watch and why they should watch it. Finally, the third goal of my website is to show the different streaming services as a starting point for watching anime and to provide a place where fans can shop.

**Target audience:** The target audience is for those who have never heard about anime, those who are inclined to watch anime, and those who already watch anime.

**Opportunity, Problem, Topic, or Issue:** I will grab the attention of people and hopefully convince them to watch anime. I will explain why I like to watch certain anime shows and address the issue where people do not appreciate the amount of work that goes into creating an anime.

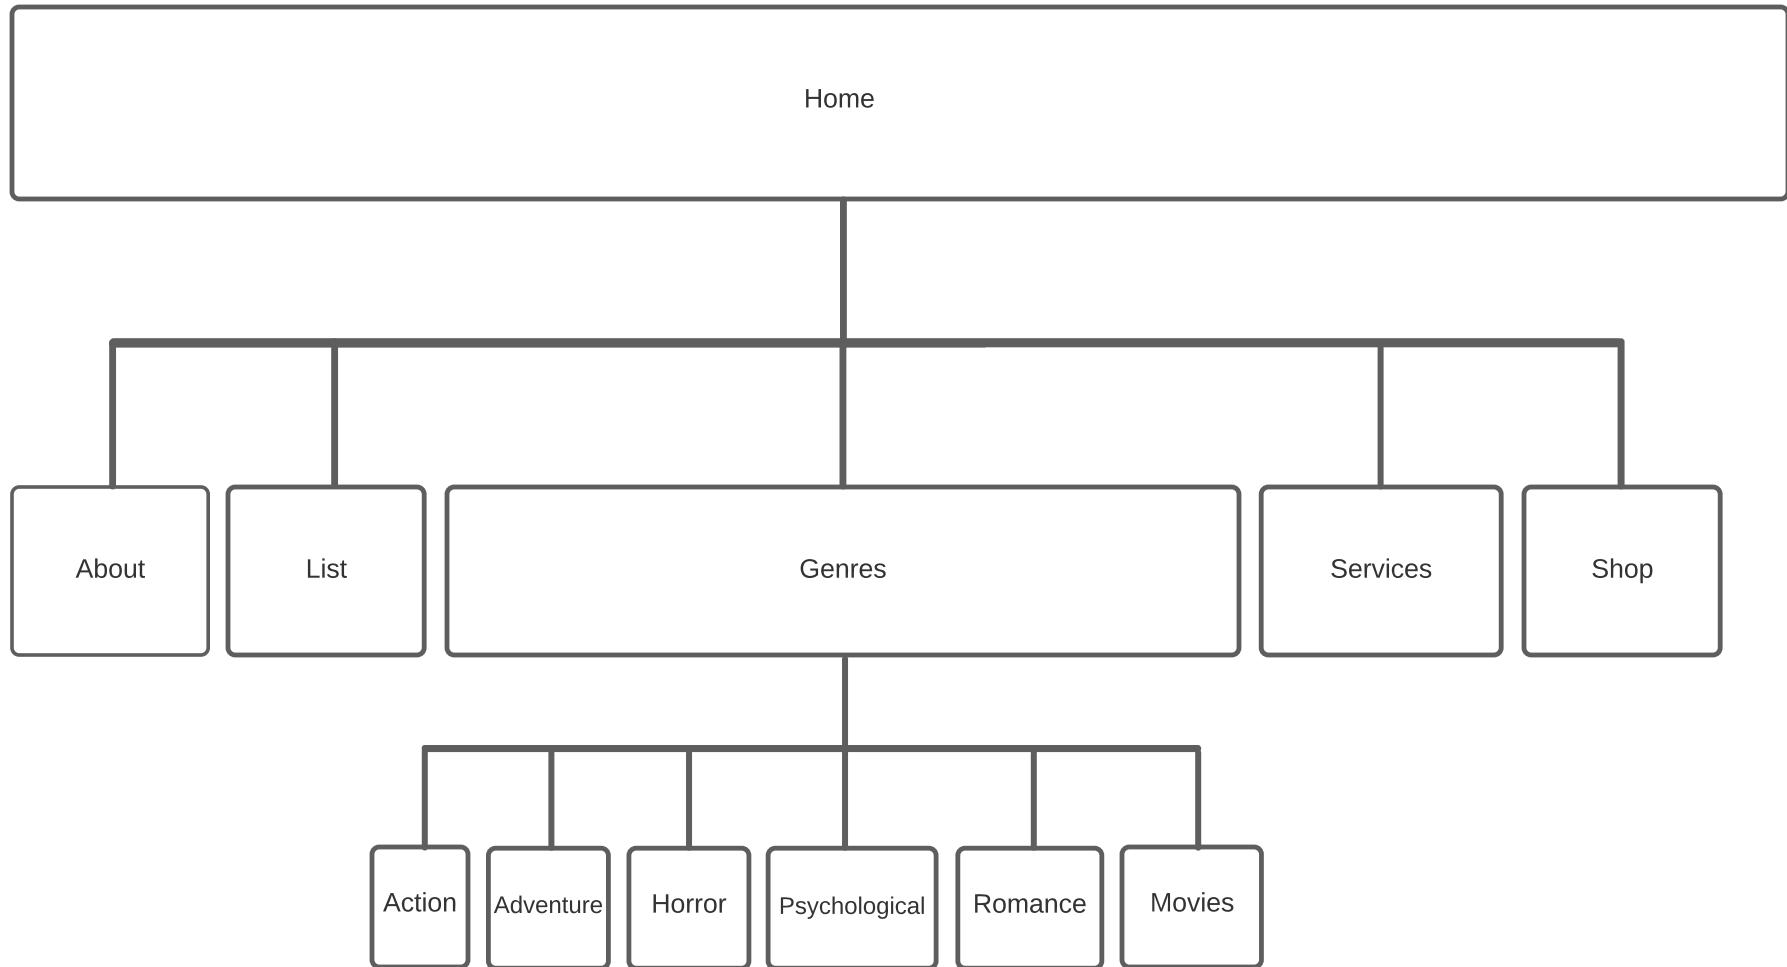

**Type of Content:** I will do this by including images, recommendations in table form, graphics regarding how popular it is, embedded videos, external links, and a quick synopsis of the anime.
